

Scale-up of COVID-19 vaccination through integration with routine immunization & community-based surveillance of vaccine-preventable diseases

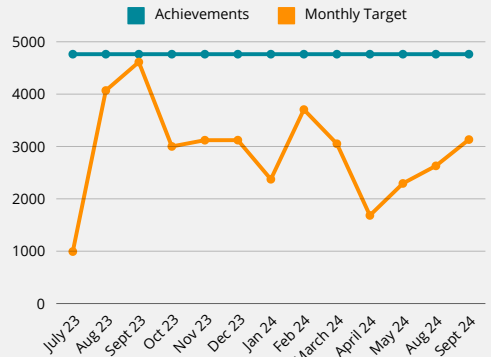

CGPP Project Sites.

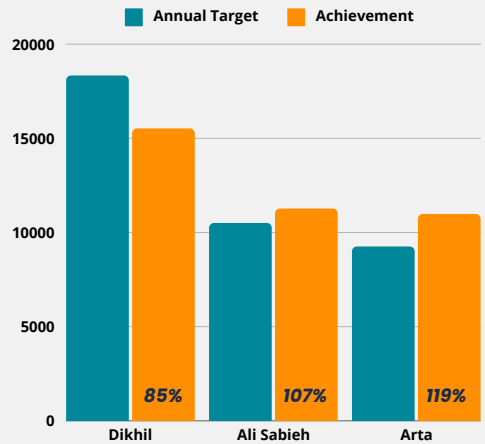

Key Achievements: COVID-19

- The project is implemented in three Regional Referral Hospitals across the 3 regions (+1)
- Vaccination teams consisted of 15 MoH staff and 22 Community Health Workers (CHWs), supervised by the Chief Doctors and MoH Regional Coordinators facilitating project activities
- Capacity building sessions on supply and cold chain management, community engagement and mobilization, and data collection and reporting, conducted for vaccination teams
- 615 outreach activities were conducted and 1,542 households visited by the vaccination team across the 3 regions.
- Administered 37,787 (20% F, 80% M) COVID-19 doses translating to 99% of the project target of 38,107.
- 1,273 people reached with integrated PHC services during outreaches. Services offered include ophthalmology, wound treatments and general consultation.
- Vaccinated 9,658 (54% F, 46% M) children (0-5 Years) through integrated routine immunization. This achievement translates to 121% of the total 8,000 Project Target.
